

IROPS Crew Assignment Policy

Purpose

Synthetic policy defining basic crew considerations during disruption recovery.

Qualification

Assigned crew must hold the qualifications required for the relevant aircraft type and operational assignment.

Availability

Only operationally available crew should be considered for reassignment.

Location

Crew location must be considered when evaluating reassignment feasibility.

Duty Constraints

Crew duty-time and rest requirements are hard operational constraints and must be checked before reassignment.

Recommendation

Automated crew matching provides candidates for operational review and does not bypass airline safety procedures.
